Recommendation concerning Education for International Understanding, Co-operation and Peace and Education relating to Human Rights and Fundamental Freedoms

Adopted by the General Conference of UNESCO at its 18th session on 19 November 1974

The General Conference of the United Nations Educational, Scientific and Cultural Organization, meeting in Paris from 17 October to 23 November 1974, at its eighteenth session,

Mindful of the responsibility incumbent on States to achieve through education the aims set forth in the Charter of the United Nations, the Constitution of UNESCO, the Universal Declaration of Human Rights and the Geneva Conventions for the Protection of Victims of War of 12 August 1949, in order to promote international understanding, co-operation and peace and respect for human rights and fundamental freedoms,

Reaffirming the responsibility which is incumbent on UNESCO to encourage and support in Member States any activity designed to ensure the education of all for the advancement of justice, freedom, human rights and peace,

Noting nevertheless that the activity of UNESCO and of its Member States sometimes has an impact only on a small minority of the steadily growing numbers of schoolchildren, students, young people and adults continuing their education, and educators, and that the curricula and methods of international education are not always attuned to the needs and aspirations of the participating young people and adults,

Noting moreover that in a number of cases there is still a wide disparity between proclaimed ideals, declared intentions and the actual situation,

Having decided, at its seventeenth session, that this education should be the subject of a recommendation to Member States,

Adopts this nineteenth day of November 1974, the present recommendation.

The General Conference recommends that Member States should apply the following provisions by taking whatever legislative or other steps may be required in conformity with the constitutional practice of each State to give effect within their respective territories to the principles set forth in this recommendation.

The General Conference recommends that Member States bring this recommendation to the attention of the authorities, departments or bodies responsible for school education, higher education and out-of-school education, of the various organizations carrying out educational work among young people and adults such as student and youth movements, associations of pupils’ parents, teachers’ unions and other interested parties.

The General Conference recommends that Member States submit to it, by dates and in the form to be decided upon by the Conference, reports concerning the action taken by them in pursuance of this recommendation.

I. SIGNIFICANCE OF TERMS

1. For the purposes of this recommendation:

(a) The word "education" implies the entire process of social life by means of which individuals and social groups learn to develop consciously within, and for the benefit of, the national and international communities, the whole of their personal capacities, attitudes, aptitudes and knowledge. This process is not limited to any specific activities.
(b) The terms "international understanding", "co-operation" and "peace" are to be considered as an indivisible whole based on the principle of friendly relations between peoples and States having different social and political systems and on the respect for human rights and fundamental freedoms. In the text of this recommendation, the different connotations of these terms are sometimes gathered together in a concise expression, "international education".

(c) "Human rights" and "fundamental freedoms" are those defined in the United Nations Charter, the Universal Declaration of Human Rights and the International Covenants on Economic, Social and Cultural Rights and on Civil and Political Rights.

II. SCOPE

2. This recommendation applies to all stages and forms of education.

III. GUIDING PRINCIPLES

3. Education should be infused with the aims and purposes set forth in the Charter of the United Nations, the Constitution of UNESCO and the Universal Declaration of Human Rights, particularly Article 26, paragraph 2, of the last-named, which states: "Education shall be directed to the full development of the human personality and to the strengthening of respect for human rights and fundamental freedoms. It shall promote understanding, tolerance and friendship among all nations, racial or religious groups, and shall further the activities of the United Nations for the maintenance of peace."

4. In order to enable every person to contribute actively to the fulfilment of the aims referred to in paragraph 3, and promote international solidarity and co-operation, which are necessary in solving the world problems affecting the individuals' and communities' lives and exercise of fundamental rights and freedoms, the following objectives should be regarded as major guiding principles of educational policy:

(a) An international dimension and a global perspective in education at all levels and in all its forms;

(b) Understanding and respect for all peoples, their cultures, civilizations, values and ways of life, including domestic ethnic cultures and cultures of other nations;

(c) Awareness of the increasing global interdependence between peoples and nations;

(d) Abilities to communicate with others;

(e) Awareness not only of the rights but also of the duties incumbent upon individuals, social groups and nations towards each other;

(f) Understanding of the necessity for international solidarity and co-operation; (g) Readiness on the part of the individual to participate in solving the problems of his community, his country and the world at large.

5. Combining learning, training, information and action, international education should further the appropriate intellectual and emotional development of the individual. It should develop a sense of social responsibility and of solidarity with less privileged groups and should lead to observance of the principles of equality in everyday conduct. It should also help to develop qualities, aptitudes and abilities which enable the individual to acquire a critical understanding of problems at the national and the international level; to understanding and explain facts, opinions and ideas; to work in a group; to accept and participate in free discussions; to observe the elementary rules of procedure applicable to any discussion; and to base value-judgements and decisions on a rational analysis of relevant facts and factors.

6. Education should stress the inadmissibility of recourse to war for purposes of expansion, aggression and domination, or to the use of force and violence for purposes of repression, and should bring every person to understand and assume his or her responsibilities for the maintenance of peace. It should contribute to international understanding and strengthening of world peace and to the activities in the struggle against colonialism and neo-colonialism in all their forms and manifestations, and against all forms and varieties of racialism, fascism, and apartheid as well as other ideologies which breed national and racial hatred and which are contrary to the purposes of this recommendation.
IV. NATIONAL POLICY, PLANNING AND ADMINISTRATION

7. Each Member State should formulate and apply national policies aimed at increasing the efficacy of education in all its forms and strengthening its contribution to international understanding and co-operation, to the maintenance and development of a just peace, to the establishment of social justice, to respect for and application of human rights and fundamental freedoms, and to the eradication of the prejudices, misconceptions, inequalities and all forms of injustice which hinder the achievement of these aims.

8. Member States should in collaboration with the National Commissions take steps to ensure co-operation between ministries and departments and co-ordination of their efforts to plan and carry out concerted programmes of action in international education.

9. Member States should provide, consistent with their constitutional provisions, the financial, administrative, material and moral support necessary to implement this recommendation.

V. PARTICULAR ASPECTS OF LEARNING, TRAINING AND ACTION

Ethical and civil aspects

10. Member States should take appropriate steps to strengthen and develop in the processes of learning and training, attitudes and behaviour based on recognition of the equality and necessary interdependence of nations and peoples.

11. Member States should take steps to ensure that the principles of the Universal Declaration of Human Rights and of the International Convention on the Elimination of All Forms of Racial Discrimination become an integral part of the developing personality of each child, adolescent, young person or adult by applying these principles in the daily conduct of education at each level and in all its forms, thus enabling each individual to contribute personally to the regeneration and extension of education in the direction indicated.

12. Member States should urge educators, in collaboration with pupils, parents, the organizations concerned and the community, to use methods which appeal to the creative imagination of children and adolescents and to their social activities and thereby to prepare them to exercise their rights and freedoms while recognizing and respecting the rights of others and to perform their social duties.

13. Member States should promote, at every stage of education, an active civic training which will enable every person to gain a knowledge of the method of operation and the work of public institutions, whether local, national or international, to become acquainted with the procedures for solving fundamental problems; and to participate in the cultural life of the community and in public affairs. Wherever possible, this participation should increasingly link education and action to solve problems at the local, national and international levels.

14. Education should include critical analysis of the historical and contemporary factors of an economic and political nature underlying the contradictions and tensions between countries, together with study of ways of overcoming these contradictions, which are the real impediments to understanding, true international co-operation and the development of world peace.

15. Education should emphasize the true interests of peoples and their incompatibility with the interests of monopolistic groups holding economic and political power, which practise exploitation and foment war.

16. Student participation in the organization of studies and of the educational establishment they are attending should itself be considered a factor in civic education and an important element in international education.

Cultural aspects

17. Member States should promote, at various stages and in various types of education, study of different cultures, their reciprocal influences, their perspectives and ways of life, in order to encourage mutual appreciation of the differences between them. Such study should, among other things, give due importance to the teaching of foreign languages, civilizations and cultural heritage as a means of promoting international and inter-cultural understanding.
Study of the major problems of mankind

18. Education should be directed both towards the eradication of conditions which perpetuate and aggravate major problems affecting human survival and well-being - inequality, injustice, international relations based on the use of force - and towards measures of international co-operation likely to help solve them. Education which in this respect must necessarily be of an interdisciplinary nature should relate to such problems as:

(a) Equality of rights of peoples, and the right of peoples to self-determination;

(b) The maintenance of peace; different types of war and their causes and effects; disarmament; the inadmissibility of using science and technology for warlike purposes and their use for the purposes of peace and progress; the nature and effect of economic, cultural and political relations between countries and the importance of international law for these relations, particularly for the maintenance of peace;

(c) Action to ensure the exercise and observance of human rights including those of refugees; racialism and its eradication; the fight against discrimination in its various forms;

(d) Economic growth and social development and their relation to social justice; colonialism and decolonization; ways and means of assisting developing countries; the struggle against illiteracy; the campaign against disease and famine; the fight for a better quality of life and the highest attainable standard of health; population growth and related questions;

(e) The use, management and conservation of natural resources, pollution of the environment;

(f) Preservation of the cultural heritage of mankind;

(g) The role and methods of action of the United Nations system in efforts to solve such problems and possibilities for strengthening and furthering its action.

19. Steps should be taken to develop the study of those sciences and disciplines which are directly related to the exercise of the increasingly varied duties and responsibilities involved in international relations.

Other aspects

20. Member States should encourage educational authorities and educators to give education planned in accordance with this recommendation an interdisciplinary, problem-oriented content adapted to the complexity of the issues involved in the application of human rights and in international co-operation, and in itself illustrating the ideas of reciprocal influence, mutual support and solidarity. Such programmes should be based on adequate research, experimentation and the identification of specific educational objectives.

21. Member States should endeavour to ensure that international educational activity is granted special attention and resources when it is carried out in situations involving particularly delicate or explosive social problems in relations, for example, where there are obvious inequalities in opportunities for access to education.

VI. ACTION IN VARIOUS SECTORS OF EDUCATION

22. Increased efforts should be made to develop and infuse an international and inter-cultural dimension at all stages and in all forms of education.

23. Member States should take advantage of the experience of the Associated Schools which carry out, with UNESCO’s help, programmes of international education. Those concerned with Associated Schools in Member States should strengthen and renew their efforts to extend the programme to other educational institutions and work towards the general application of its results. In other Member States, similar action should be undertaken as soon as possible. The experience of other educational institutions which have carried out successful programmes of international education should also be studied and disseminated.

24. As pre-school education develops, Member States should encourage in it activities which correspond to the purposes of the recommendation because fundamental attitudes, such as, for example, attitudes on
race, are often formed in the pre-school years. In this respect, the attitude of parents should be deemed to be an essential factor for the education of children, and the adult education referred to in paragraph 30 should pay special attention to the preparation of parents for their role in pre-school education. The first school should be designed and organized as a social environment having its own character and value, in which various situations, including games, will enable children to become aware of their rights, to assert themselves freely while accepting their responsibilities, and to improve and extend through direct experience their sense of belonging to larger and larger communities - the family, the school, then the local, national and world communities.

25. Member States should urge the authorities concerned, as well as teachers and students, to re-examine periodically how post-secondary and university education should be improved so that it may contribute more fully to the attainment of the objectives of this recommendation.

26. Higher education should comprise civic training and learning activities for all students that will sharpen their knowledge of the major problems which they should help to solve, provide them with possibilities for direct and continuous action aimed at the solution of those problems, and improve their sense of international co-operation.

27. As post-secondary educational establishments, particularly universities, serve growing numbers of people, they should carry out programmes of international education as part of their broadened function in lifelong education and should in all teaching adopt a global approach. Using all means of communication available to them, they should provide opportunities, facilities for learning and activities adapted to people's real interests, problems and aspirations.

28. In order to develop the study and practice of international co-operation, post-secondary educational establishments should systematically take advantage of the forms of international action inherent in their role such as visits from foreign professors and students and professional co-operation between professors and research teams in different countries. In particular, studies and experimental work should be carried out on the linguistic, social, emotional and cultural obstacles, tensions, attitudes and actions which affect both foreign students and host establishments.

29. Every stage of specialized vocational training should include training to enable students to understand their role and the role of their professions in developing their society, furthering international co-operation, maintaining and developing peace, and to assume their role actively as early as possible.

30. Whatever the aims and forms of out-of-school education, including adult education, they should be based on the following considerations:

(a) As far as possible a global approach should be applied in all out-of-school education programmes, which should comprise the appropriate moral, civic, cultural, scientific and technical elements of international education;

(b) All the parties concerned should combine efforts to adapt and use the mass media of communication, self-education, and inter-active learning, and such institutions as museums and public libraries to convey relevant knowledge to the individual, to foster in him or her favourable attitudes and a willingness to take positive action, and to spread knowledge and understanding of the educational campaigns and programmes planned in accordance with the objectives of this recommendation;

(c) The parties concerned, whether public or private, should endeavour to take advantage of favourable situations and opportunities, such as the social and cultural activities of youth centres and clubs, cultural centres, community centres or trade unions, youth gatherings and festivals, sporting events, contacts with foreign visitors, students or immigrants and exchanges of persons in general.

31. Steps should be taken to assist the establishment and development of such organizations as student and teacher associations for the United Nations, international relations clubs and UNESCO Clubs, which should be associated with the preparation and implementation of co-ordinated programmes of international education.

32. Member States should endeavour to ensure that, at each stage of school and out-of-school education, activities directed towards the objectives of this recommendation be co-ordinated and form a coherent whole.
within the curricula for the different levels and types of education, learning and training. The principles of cooperation and association which are inherent in this recommendation should be applied in all educational activities.

VII. TEACHER PREPARATION

33. Member States should constantly improve the ways and means of preparing and certifying teachers and other educational personnel for their role in pursuing the objectives of this recommendation and should, to this end:

(a) Provide teachers with motivation for their subsequent work: commitment to the ethics of human rights and to the aim of changing society, so that human rights are applied in practice; a grasp of the fundamental unity of mankind; ability to instil appreciation of the riches which the diversity of cultures can bestow on every individual, group or nation;

(b) Provide basic interdisciplinary knowledge of world problems and the problems of international co-operation, through, among other means, work to solve these problems;

(c) Prepare teachers themselves to take an active part in devising programmes of international education and educational equipment and materials, taking into account the aspirations of pupils and working in close collaboration with them;

(d) Comprise experiments in the use of active methods of education and training in at least elementary techniques of evaluation, particularly those applicable to the social behaviour and attitudes of children, adolescents and adults; (e) Develop aptitudes and skills such as a desire and ability to make educational innovations and to continue his or her training; experience in teamwork and in interdisciplinary studies; knowledge of group dynamics; and the ability to create favourable opportunities and take advantage of them;

(f) Include the study of experiments in international education, especially innovative experiments carried out in other countries, and provide those concerned, to the fullest possible extent, with opportunities for making direct contact with foreign teachers.

34. Member States should provide those concerned with direction, supervision or guidance - for instance, inspectors, educational advisers, principals of teacher-training colleges and organizers of educational activities for young people and adults - with training, information and advice enabling them to help teachers work towards the objectives of this recommendation, taking into account the aspirations of young people with regard to international problems and new educational methods that are likely to improve prospects for fulfilling these aspirations. For these purposes, seminars or refresher courses relating to international and inter-cultural education should be organized to bring together authorities and teachers; other seminars or courses might permit supervisory personnel and teachers to meet with other groups concerned such as parents, students, and teachers’ associations. Since there must be a gradual but profound change in the role of education, the results of experiments for the remodelling of structures and hierarchical relations in educational establishments should be reflected in training, information and advice.

35. Member States should endeavour to ensure that any programme of further training for teachers in service or for personnel responsible for direction includes components of international education and opportunities to compare the results of their experiences in international education.

36. Member States should encourage and facilitate educational study and refresher courses abroad, particularly by awarding fellowships, and should encourage recognition of such courses as part of the regular process of initial training, appointment, refresher training and promotion of teachers.

37. Member States should organize or assist bilateral exchanges of teachers at all levels of education.

VIII. EDUCATIONAL EQUIPMENT AND MATERIALS

38. Member States should increase their efforts to facilitate the renewal, production, dissemination and exchange of equipment and materials for international education, giving special consideration to the fact that in many countries pupils and students receive most of their knowledge about international affairs through the mass media outside the school. To meet the needs expressed by those concerned with international
education, efforts should be concentrated on overcoming the lack of teaching aids and on improving their quality. Action should be on the following lines:

(a) Appropriate and constructive use should be made of the entire range of equipment and aids available, from textbooks to television, and of the new educational technology;

(b) There should be a component of special mass media education in teaching to help the pupils to select and analyse the information conveyed by mass media;

(c) A global approach, comprising the introduction of international components, serving as a framework for presenting local and national aspects of different subjects and illustrating the scientific and cultural history of mankind, should be employed in textbooks and all other aids to learning, with due regard to the value of the visual arts and music as factors conducive to understanding between different cultures;

(d) Written and audio-visual materials of an interdisciplinary nature illustrating the major problems confronting mankind and showing in each case the need for international co-operation and its practical form should be prepared in the language or languages of instruction of the country with the aid of information supplied by the United Nations, UNESCO and other Specialized Agencies;

(e) Documents and other materials illustrating the culture and the way of life of each country, the chief problems with which it is faced, and its participation in activities of world-wide concern should be prepared and communicated to other countries.

39. Member States should promote appropriate measures to ensure that educational aids, especially textbooks, are free from elements liable to give rise to misunderstanding, mistrust, racist reactions, contempt or hatred with regard to other groups or peoples. Materials should provide a broad background of knowledge which will help learners to evaluate information and ideas disseminated through the mass media that seem to run counter to the aims of this recommendation.

40. According to its needs and possibilities, each Member State should establish or help to establish one or more documentation centres offering written and audio-visual material devised according to the objectives of this recommendation and adapted to the different forms and stages of education. These centres should be designed to foster the reform of international education, especially by developing and disseminating innovative ideas and materials, and should also organize and facilitate exchanges of information with other countries.

IX. RESEARCH AND EXPERIMENTATION

41. Member States should stimulate and support research on the foundations, guiding principles, means of implementation and effects of international education and on innovations and experimental activities in this field, such as those taking place in the Associated Schools. This action calls for collaboration by universities, research bodies and centres, teacher-training institutions, adult education training centres and appropriate non-governmental organizations.

42. Member States should take appropriate steps to ensure that teachers and the various authorities concerned build international education on a sound psychological and sociological basis by applying the results of research carried out in each country on the formation and development of favourable or unfavourable attitudes and behaviour, on attitude change, on the interaction of personality development and education and on the positive or negative effects of educational activity. A substantial part of this research should be devoted to the aspirations of young people concerning international problems and relations.

X. INTERNATIONAL CO-OPERATION

43. Member States should consider international co-operation a responsibility in developing international education. In the implementation of this recommendation they should refrain from intervening in matters which are essentially within the domestic jurisdiction of any State in accordance with the United Nations Charter. By their own actions, they should demonstrate that implementing this recommendation is itself an exercise in international understanding and co-operation. They should, for example, organize, or help the appropriate authorities and non-governmental organizations to organize, an increasing number of international meetings and study sessions on international education; strengthen their programmes for the
reception of foreign students, research workers, teachers and educators belonging to workers’ associations and adult education associations; promote reciprocal visits by schoolchildren, and student and teacher exchanges; extend and intensify exchanges of information on cultures and ways of life; arrange for the translation or adaptation and dissemination of information and suggestions coming from other countries.

44. Member States should encourage the co-operation between their Associated Schools and those of other countries with the help of UNESCO in order to promote mutual benefits by expanding their experiences in a wider international perspective.

45. Member States should encourage wider exchanges of textbooks, especially history and geography textbooks, and should, where appropriate, take measures, by concluding if possible, bilateral and multilateral agreements, for the reciprocal study and revision of textbooks and other educational materials in order to ensure that they are accurate, balanced, up to date and unprejudiced and will enhance mutual knowledge and understanding between different peoples.
